Embedded Systems International

Project Application Research Worksheet (PD1)

Name: Preston Gaskill

Lab Partner/Team Member Name(s) (if you worked together and are submitting the same document or mostly the same answers):

Lab Section: 4

Submit your document as a PDF file in Canvas under the corresponding project assignment.

1. Find one or more articles on an embedded system application that you are interested in that involves mobile robots or autonomous vehicles. Your article can be about a ground robot like the iRobot in lab, or it can be about an air, underwater, surface, or space vehicle. It could also be about science fiction or future micro/nano vehicles, like in the movie the Fantastic Voyage. Examples of several applications are in the Google Drive folder for the course under "Lab Project AV application ideas" – see the Google Drive link on the Canvas Home page.

   You can search anywhere for applications. You are not limited to the examples in the folder.

   You will not be required to use this application for your project. You will consider ideas for your project in collaboration with your team members. For now, just browse and find something that interests you.

I chose "Nuro's Pizza Robot Will Bring You a Domino's Pie" from Google Drive as my article.

2. Properly cite the article you found in #1.

Use the format in the IEEE citation reference manual (also provided in the Google folder): https://ieee-dataport.org/sites/default/files/analysis/27/IEEE%20Citation%20Guidelines.pdf .

A. Davies, “Nuro’s Pizza Robot Will Bring You a Domino’s Pie,” Wired. 17 June,

2019.https://www.wired.com/story/nuro-dominos-pizza-delivery-self-driving-rob

ot-houston/

3. In Discord, create a New Post in the “# project-pd1” channel. In your post, include the following information:

A. List your name(s), major(s), and lab section for those contributing to this post.

Hello! My name is Preston Gaskill, I am in lab section 4 and my major is computer

engineering

B. Link to the article(s) that you chose.

https://www.wired.com/story/nuro-dominos-pizza-delivery-self-driving-robot-ho

uston/

C. Provide the properly formatted citation(s) from #2.

A. Davies, “Nuro’s Pizza Robot Will Bring You a Domino’s Pie,” Wired. 17 June,

2019.https://www.wired.com/story/nuro-dominos-pizza-delivery-self-driving-rob

ot-houston/

D. Briefly describe the embedded system, a problem it is solving, and at least one user of the system.

The embedded system from the article is about the R2 Robot designed and produced by Nuro to deliver items, most notably from their partnership with Domino Pizza. Though they are not the first to begin deliveries with the R2, as it has been delivering groceries for Kroger in Scottsdale, Arizona, they are part of one of the most significant moves in automatizing

delivery. Domino's has been facing a shortage of delivery drivers, with about 10,000 positions available in the US, for quite some time. With some help from the Nuro they are looking to make some progress to this issue by automating delivery via the R2. The process has yet to be widespread, but it is one of the first steps a large company as taken to automize their food delivery.

4. In Discord, use “Copy Message Link”. Include the message link here and in your team channel in Discord.
